

QUICK REFERENCE SHEET

Bill Splitting and Tip Calculation Reference

A better split-bill and gratuity reference that keeps fairness, transparency, and rounding choices visible.

QUICK OVERVIEW

Category: everyday cooking

Includes 1 related guide page.

Links back to 2 calculator tools.

FORMULA HIGHLIGHTS

Tip

$$\text{tip} = \text{bill} \times \text{tip rate}$$

Share

$$\text{share} = \text{total} / \text{number of people}$$

EQUAL VERSUS WEIGHTED SHARING

Choose equal splitting when use was broadly similar. Choose weighted sharing when individuals clearly consumed different amounts.

TIP HANDLING

- Keep the chosen tip percentage visible.
- Check whether service is already included.
- Add the tip before or after the split according to the chosen method and show that method clearly.

WORKED EXAMPLES

60 split between 3 with 10% tip -> 66 total -> 22 each on an equal split.

Rounding differences should be handled openly so nobody is surprised.

PRACTICAL REMINDERS

- Show subtotal, tip, total, and per-person share clearly.
- Do not hide small rounding adjustments.
